

Digital Pressure Gauge (Diaphragm Seals for Homogenizing)

3306 Series

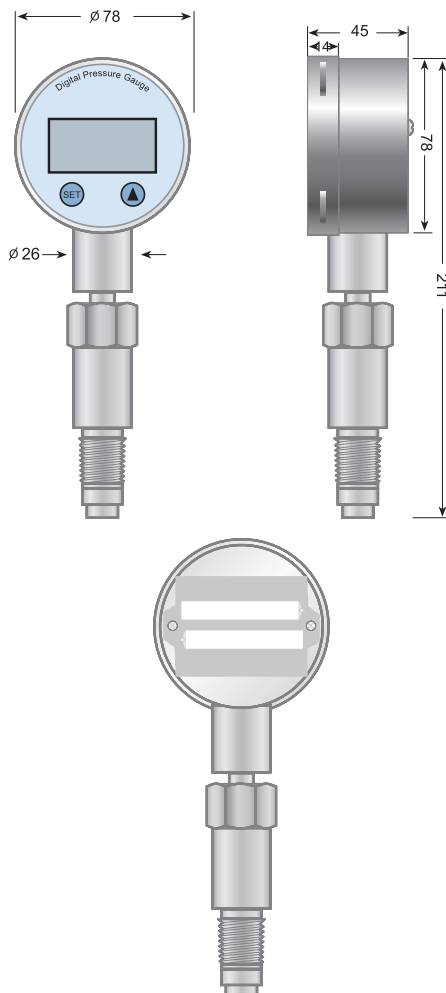

Application

Model 3306 digital pressure gauge is specially designed for homogenizing machines and systems.

Special feature

Model 3306 has the diaphragm seal mounting with digital pressure gauge. The diaphragm seal has flush membrane which can bear pressure as high as 2000bar. It has good durability for long life without damaging the membrane. There is no need to fill the working media between the diaphragm seal and pressure gauge in this construction, so there is no worry of leaking of working media.

Dimension

Specification

Dial size: 80mm

4-Digit LCD display

Measuring range: 0-500bar, 0-700bar, 0-1200bar, 0-1500bar, 0-2000bar

Accuracy: 0.5%

Process connection: M20 x 1.5" male, 1/2" BSP male

Wetted part: 316 stainless steel, wall thickness 3mm

Output: 4-20mA

Battery powered, Lithium Battery, 3V, can be replaced from backside of case

Life time of battery: one and a half years

SET: Allows for recalibration of zero

"▲" : On/Off(Pressure for 3 seconds)

How to Order

3306-Accuracy: - Thread - Range - Pressure unit

3320	- Accuracy	- Thread	- Range	- Pressure unit
	0.5: 0.5%	1/2" BSP M20X1.5	Pressure value 4 Digit maximum	bar psi MPa kPa
